

Live Soil

SOIL AMENDMENT SOLUTION

Certified in Organic Agriculture

Enhances plants robustness

Live Soil is a biological agent which activates and rejuvenates soils that have been disinfected by physical or chemical means. **Live Soil** is applied after the disinfection of soil and prior to sowing or planting and aims at the preparation of soil for the crop. **Live Soil** contains natural beneficial soil microorganisms which are capable of colonizing soil quickly and efficiently, creating an ideal environment for the growth of healthy, vigorous and highly productive plants.

STANDARD ANALYSIS

- Beneficial soil microorganisms
- Inert material

CROPS

All crops

PROPERTIES

- It restores natural soil microflora after disinfection.
- It enhances disinfection efficiency.
- It improves the structure and the composition of soil, since the contained microorganisms dissolve soil nutrients and increase organic matter.
- It creates fertile soils.
- It accelerates seeds germination and seedlings growth, thanks to plants similar hormones (auxins, cytokinins, gibberellins) which are produced and secreted by the contained beneficial microorganisms.
- It contributes to the quick and safe establishment of plants.
- It enhances vigor and productivity of the crop, since beneficial microorganisms promote the availability of soil nutrients and produce substances which improve plant growth and crop yield.

PACKAGES

*Plastic Bottle 250 ml	box of	50 pieces
Plastic Bottle 1 l	box of	12 pieces
*Plastic Cont. 5 l	box of	4 pieces
*Plastic Cont. 12 l	-	-
*Plastic Cont. 25 l	-	-
*Plastic Drum 200 l	-	-
*Pl. Tank (IBC) 1,000 l	-	-

*Available upon request
