

Combi-Mix

MICRONUTRIENT MIXTURE

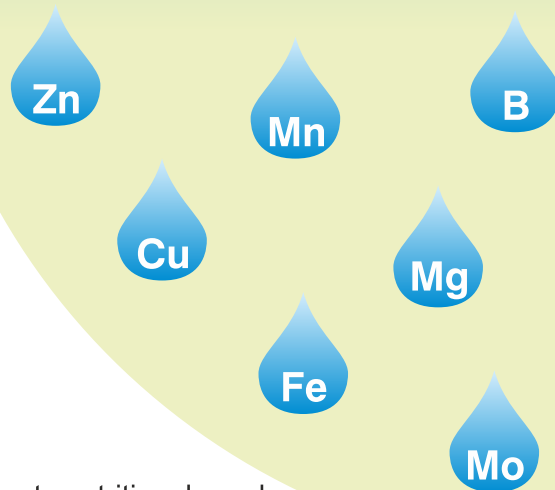

Combi-Mix is a micronutrient mixture for the prevention and, in some cases, the correction of deficiencies in all plants. The trace elements it contains come from complex chelated compounds (chelating agent EDTA) and mineral salts. **Combi-Mix** is totally water soluble and is recommended for both foliar and fertigation applications.

STANDARD ANALYSIS

- Iron4.10 %
- Magnesium4.60%
- Manganese3.80%
- Zinc1.40%
- Boron0.65%
- Copper1.30%
- Molybdenum0.07%

CROPS

All crops

PROPERTIES

- They fully cover plants nutritional needs in secondary nutrients.
- They prevent nutrient deficiencies occurrence.
- They correct existing nutrient deficiencies and they eliminate their symptoms.
- They ensure good plants health.
- They provide high yields and consequently higher profits to the grower.
