AZOTO-S

Azoto-S is a clear liquid Nitrogen fertilizer which is designed especially for the fruit bearing trees. It is very effective and totally water soluble. **Azoto-S** is applied easily through foliar sprays and fertigation providing plants with nitrogen for the quick growth of fruits as well as sulphur for the improvement of the fruits' quality. **Azoto-S** contributes to the flower thinning in fruit trees (especially in apples) affecting the fruits' quantity per tree and the number of marketable fruits of class A'. Furthermore **Azoto-S** is applied to cover the needs of nitrogen and sulphur in field crops such as oilseed rapes, cereals, pastures, fodders, corns, potatoes and horticulture.

PROPERTIES AND USES:

- Very effective and totally water soluble Nitrogen fertilizer.
- Specialized for fruit bearing trees.
- Assists the growth of fruits.
- Excellent action at thinning on pome crops.

APPLICATION:

Azoto-S can be applied by fertigation through the irrigation/fertigation system and with foliar sprays according to the following application rates:

Application Rate: Generally, it is applied at the following application rate.

Soil application: 10-30 l/ha.

Foliar application: 10-30 l/ha.

STANDARD ANALYSIS**(w/w)**

Nitrogen (N)	15.00 %
Sulphur	22.00 %

PHYSICAL PROPERTIES:

Appearance:	Pink colored solution.
Density:	1.324
Solubility:	100% water soluble
pH:	8.0
