

Euphoria

New series of water-soluble fertilizers for efficient crop nutrition

Did you know that a full and complete micronutrient fertilization of intensively cultivated plants can increase production yield by up to 50%? Have you heard before that crops fertilized with the correct ratio of N-P-K key nutrients at each stage of their growth can give the grower up to 100% increase in profits?

To maximize yields and achieve high profits, **HUMOFERT** has created the new **EUPHORIA** series of water-soluble fertilizers. **EUPHORIA** are made from high purity and soluble raw materials by combining macronutrients N-P-K with an excellent mixture of immediately assimilable chelated trace elements (iron, zinc, copper, manganese, boron, molybdenum).

EUPHORIA fertilizers are available in many different N-P-K formulations, offering the grower the opportunity to choose the most suitable according to the requirements of the stage of development of his crop. All types have a pH in the acidic zone allowing the roots to absorb nutrients even in highly conductive soil conditions.

It increases
the yields of crops
bringing smiles
to the producers

General Application Dosages
Fertilization: 10-30kg per hectare
Foliar spray: 400g per 100L of water.

The product comes in the following packages:
25 kg bags in a pallet of 40 pieces
